

# **\$-SMART BLEND OPTIMIZER – STEP-BY-STEP HANDS ON**

## **1. Installation and Requirements**

- Microsoft (MS) Windows 7, 8 or 10
- Apple MAC's: require Windows Emulator
- Microsoft (MS) Office or EXCEL, versions 2007, 2010, 2016, 365
- MS Excel Solver add-in installed

## **2. Optimizer file names**

- SmartBlend-MG for motor gasoline
- SmartBlend-DF for Diesel
- SmartBlend-FO for Bunker Fuel and Fuel Oil

## **3. Installation Directory**

Copy distributed software to any LOCAL directory (not CLOUD or Network)

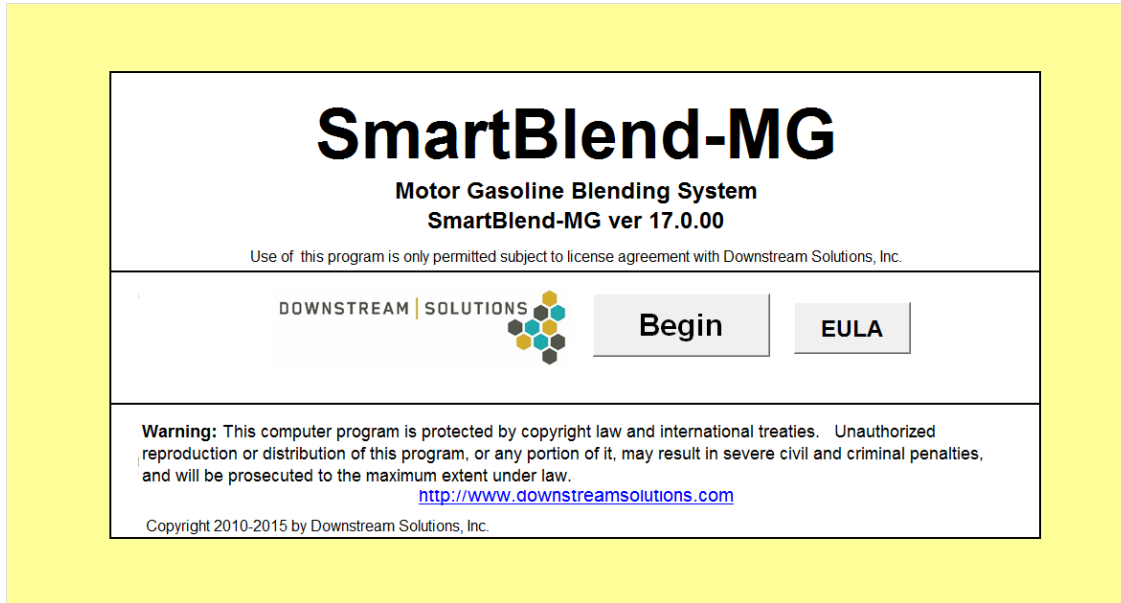

Preferably root directory of your PC; example: C:/ara/SmartBlend-MG\_17\_4

## 4. To Start Using the Optimizer

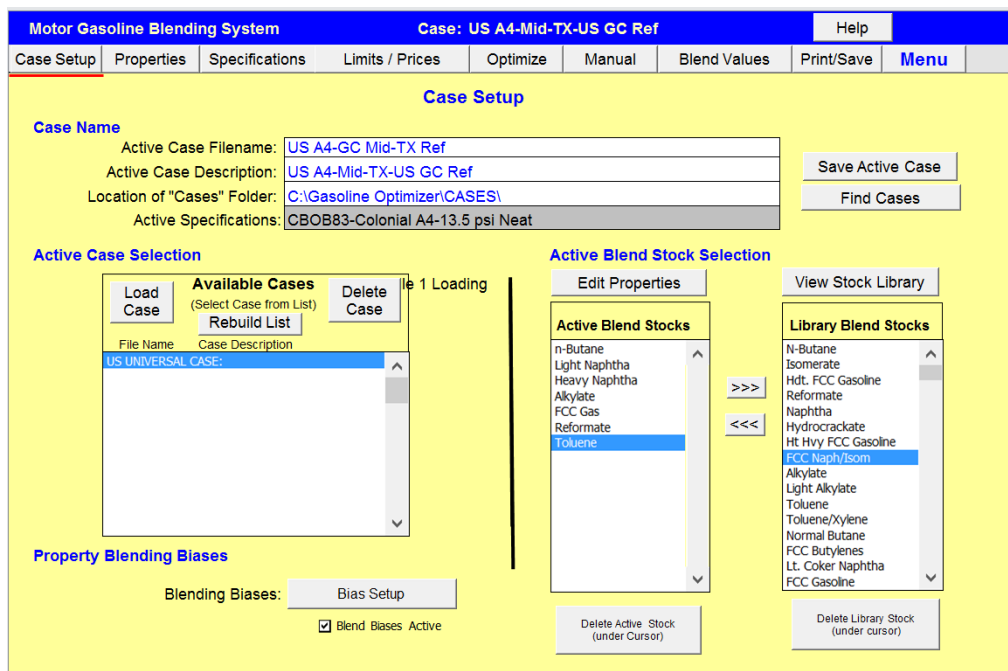

### Step 1) Starting the Optimizer

To open, double click on C:/ara/SmartBlend-MG\_17\_4 You will also see a sub-folder labeled Cases This is where your examples (called "cases") are stored.

A message will ask you to accept EULA license agreement to see the beginning screen. Next click BEGIN button.

The next display allows you to select a case to OPEN, or create a new case.

## STEP 2) Create a Case or Open an Existing Case

The Optimizer comes with a few customizable cases. You can open one of them and adding your own blend components properties up to 15 components:

Specification Name:	Blend Qualities				Component Qualities															
	Minimum Spec Quality	Maximum Spec Quality	Optimum Blend Qualities	Manual Blend Qualities	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

90 pct evap, deg F	-	-	334.4	323.1	38	237	286	277	352	487.5	229									
Final BP, deg F	-	-	411.5	400.5	105	294	335	397	460	500	235									

You can add or change the names of your blend components, plus the blend properties like RVP, RON, MON, Sulfur, Aromatic, and so on.

## STEP 3) See the Blend Component Properties

Click on "Properties" Tab on the menu bar and you are able to see the Blend Properties just created previously. Here it is possible to add more components or modify any blend properties:

The screenshot shows the 'Motor Gasoline Blending System' software interface. The 'Case: US A4-Mid-TX-US GC Ref' is selected. The 'Properties' tab is active, showing the 'Blend Stock Properties' for 'n-Butane'. A red arrow points to the 'Properties' tab in the menu bar.

Properties	Value
Density, API	107
RVP, psi	60.5
Sulfur, ppm W	10
Olefin, Vol %	0.0
Aromatic, Vol %	0
Benzene, Vol %	0.22
Mercaptan Sulf, ppm W	0
RON, Clear	91.8
MON, Clear (1)	87.8
Oxygen, Wt %	0
Oxygenate, Vol %	0
Drivability Index, deg F	110
TVL 20, deg F	-127.7
Initial BP, deg F	
10 pct evap, deg F	12
30 pct evap, deg F	
50 pct evap, deg F	18
70 pct evap, deg F	
90 pct evap, deg F	38
Final BP, deg F	105
Average BP, deg F	22.7

The 'Select Stock' list includes: n-Butane, Light Naphtha, Heavy Naphtha, Alkylate, FCC Gas, Reformate, and Toluene. The 'Navigation' panel includes buttons for 'Case Setup', 'View Input', and 'Delete Active Stock (under Cursor)'. The 'Case Setup' button is highlighted.

#### STEP 4) Select the Blend Specifications

Click on “Specifications” tab to select the right specifications. The Optimizer comes with 25 built-in Worldwide Specs. You can select the one depending on the location/country/region you are dealing with. If you are dealing with Europe, you can select for example EU95, if you are dealing with Singapore you can select Singapore 95R. It is also possible create your own specifications directly or by cloning an existing one.

SPECIFICATIONS

SPECIFICATIONS ACTIVE FOR THE OPTIMIZATION

SPECIFICATIONS SELECTED

WORLDWIDE SPECS

Here it is very important to select the property specifications that are going to be used during the optimization. For example, checking the MON means that property specification is active for the optimization. Unchecking the Benzene content(%) property specification it means this is not active during the optimization.

### STEP 5) Inventory and Price

Click on “Limits/Prices” tab to select the blend component inventory and prices. What you need to do is just add the blend components inventory, Bbl,( 1) the blend component prices(2) and the Blend batch size(3) you want to make.

Motor Gasoline Blending System Case: US A4-Mid-TX-US GC Ref Help

Case Setup Properties Specifications **Limits / Prices** Optimize Manual Blend Values Print/Save Menu

**Blend Stock and Final Product Limits and Prices**

**Blend Stocks**

1. Insert the blend components inventory for each component available.

Blend Component	Quantity, Bbl		Price, \$/bbl
	Minimum	Maximum	
n-Butane	0	30000	26.60
Light Naphtha	0	30000	35.60
Heavy Naphtha	0	30000	34.90
Alkylate	0	30000	63.30
FCC Gas	0	60000	56.60
Reformate	0	0	66.50
Toluene	0	0	79.80
Total Components	. 180000		

2. Insert the blend prices

**Final Product Blend**

Blend Size	Quantity, Bbl		Price, \$/bbl
	Minimum	Maximum	
Product Blend	1000	180000	52.10

3. Insert the Blend batch size

4. Optimize

After inserting blend inventory and prices, you are ready to Optimize clicking on the “Optimize” (4) tab.

## STEP 5) Optimize

At this point, it is possible to Optimize the blend and analyze the results. Optimize means maximizing blend profit while meeting all the constraints, e.g. specs, batch size, etc.

Octane Blending Method: Ethyl Corr (Regular)

**PROFIT**

Notes: The above Specs are for CBOB83-Colonial A4-13.5 psi Neat. \*\*\* shows a limiting specification

Warnings: The Ethyl Octane equations are composition dependent. Rerun the optimizer until the Blend Composition does not change significantly.

**Specifications selected for the Optimization**

After the Optimization we can see the "Status" of the Optimization, in this case the optimization is feasible, i.e. Specs, and Batch Size are met.

In this last screen we have the "Optimized Recipe", the "Specifications selected for the Optimization" and the most important thing, "The Profit".

## STEP 6) Considerations

The \$-Smart Blend Optimizer is a powerful tool, with a friendly interface that allows us to predict in the shortest amount of time if you can have profit with the Blend Components, the Blend Inventory and the Specifications you have. All of them (Blend Properties, inventory, price) are taken into account during the Optimization.

## **STEO 7) Information on the Optimizer**

The Optimizer uses Linear Programming. The result of the optimization takes into account simultaneously Blend Properties, Specs, Blend inventory and prices.

It is a single Blend Optimizer, meaning it is optimizing one blend at the time.

All the non-linear blend properties are calculated non-linearly, for example the RON and MON have built-in the RT-70 equation and the RVP the Chevron equation.

The Optimizer has also integrated important features such as:

- 1) Calculating the blend properties after adding Ethanol;
- 2) Analyzing whether the optimized batch meets the EPA rules for reformulated gasoline;
- 3) Manual blending tool where the user can insert manually the blend recipe, and see the expected blend properties.
